CONCRETE CUTTING : ROBOTIC HAMMERING : DEMOLITION CONTRACTOR

## STEEL MILL REHABILITATION

A wire being changed out during down hole wire sawing.

Precision wire cutting on a shake table.

Fifteen ton concrete section wire sawed and removed from old foundation while the mill was in operation.

Nationwide exposure to industrial plant engineering challenges from single foundation modifications to large capital projects in diverse industries allows Bluegrass to team our controlled demolition experience with your project requirements to maximize productive, on-schedule, safe solutions. Driven by safety Bluegrass has developed cutting edge demolition services which maximize productivity while minimizing worker exposure through robotic hammering and diamond wire sawing setting us apart as a demolition contractor. Bluegrass engineers and technicians understand it is your plant/facility with your unique concerns and exposures. Through shared planning the team adopts a no surprises shared ownership of the construction process with identified responsibilities, clear coordination and matrices to ensure performance.

Demolition of the 600 cubic yards of concrete was completed in 4 days at NNII roll line.

Rehab of the Nucor Nebraska II roll line.

"I had experience with Bluegrass in the past. They proved to be a high quality dependable contractor capable of completing large projects on schedule."

says Nucor's Construction/Contractor Coordinating Supervisor, Larry Votruba
